

## Experience your designs

Bring 3D models to life in mixed reality. Step into a powerful new way to explore, understand, and share your work with Microsoft HoloLens.

## Bring your work to life

Save time and enable faster design decisions by visualising projects in mixed reality. View designs as a tabletop model or be fully immersed at 1:1 scale.

### Models in context

Avoid a last minute surprise. Bring holographic models to site and see first-hand how designs will materialise with real-world surroundings.

### Experience your design

You drew the concept but have you seen it from every angle? Visualise a space with full-scale immersion and solve problems before breaking ground.

### See the detail

With access to key features, such as the Tape Measure and Entity Info, important and relevant information is (virtually) at your fingertips.

### Rapid iterations

Physical models cost time and money. Conversely, mixed reality models in SketchUp can be amended and scaled in an instant.

### Collaborate

Launch a co-located collaboration session with live audio. See where others look, and solve complex spatial issues as a team.

### Coordinate

Smoothly navigate key spaces in mixed reality by selecting preset scenes and focus the conversation by toggling on-and-off model layers.
